SUMMARY

Computer Science graduate with experience building full-stack web applications using JavaScript, React.js, Node.js, Express.js, and MongoDB. Interested in designing scalable backend systems, developing RESTful APIs, and applying software engineering principles to solve real-world problems through clean, maintainable code.

EDUCATION

Quaid-e-Azam University
Bachelor of Science in Computer Science
CGPA: 3.3/4.0

Sept 2022 – June 2026
Islamabad, Pakistan

PROJECTS

- Local Food Distribution System** | *Full-Stack Web Application* [Live Project](#)
- Architected a role-based food redistribution platform connecting donors, NGOs, and administrators, streamlining the donation lifecycle from food posting and verification to allocation and collection.
 - Structured the application using MVC architecture and modular development practices, improving maintainability, and separation of concerns across system components.
 - Implemented JWT authentication, email OTP verification, and role-based access control, applying secure web application architecture principles to protect user accounts and sensitive platform operations.
 - Designed and managed MongoDB database schemas and relationships to efficiently handle donations, requests, allocations, user roles, and workflow state transitions.
 - Developed an administrative allocation system that automated request management, status transitions, and NGO verification processes, improving transparency and operational efficiency.
- Voting Management REST API** | *Backend Web Application* [GitHub](#)
- Developed a secure voting backend using Node.js, Express.js, and MongoDB, designing RESTful APIs for voter authentication, candidate management, and election workflows.
 - Optimized voting logic with one-vote-per-user validation, role-based admin controls, and vote-count tracking to prevent duplicate voting and support reliable result monitoring.

EXPERIENCE

- TechHash Solutions**
Web Developer Intern
- August 2024 – September 2024**
Rawalpindi, Islamabad
- Built responsive and interactive web applications using HTML5, CSS3, and JavaScript, applying modern web development practices to create clean, user-friendly interfaces across multiple projects.
 - Strengthened core JavaScript concepts by implementing DOM manipulation, event handling, form validation, asynchronous programming, and API integration to develop dynamic and interactive user experiences.
 - Wrote modular, maintainable, and reusable code while improving debugging and problem-solving skills through regular testing, browser developer tools, and iterative project development.

SKILLS

Languages: JavaScript (ES6+), HTML5, CSS3
Frontend: React.js, Tailwind CSS
Backend: Node.js, Express.js, REST APIs, JWT Authentication
Databases: MongoDB, MySQL
Software Development: MVC Architecture, Software Design Principles
Tools: Git, GitHub
Relevant Courses: Object oriented programming, Databases, Data structures, Software Construction, Human Computer interaction
