Recommendation Letter

I am writing this reference/recommendation letter at the request of Ms. Sehrish Siddique, who is keen to pursue higher studies at your esteemed institution. I have known her for the period 2022-2026 as a teacher and supervisor. She is expected to complete her BS (CS) in September 2026. I have taught her a course titled "Web Application Frameworks (WAF)". She understood the core concepts of frontend and backend applications. She implemented core concepts of web application frameworks to create a full-stack application. She got familiar with the core concepts of MERN stack technologies comprising MongoDB, ExpressJS, ReactJS, and NodeJS. These concepts were later used in her final year project under my supervision. Her performance in this course was relatively above average and good. The title of her final year project is Local Food Distribution System for Hunger Relief. She aimed to develop a technology-driven platform to connect people facing food insecurity with local food banks and charities gathered through surplus food from donors (restaurants, supermarkets, caterers, or individual households). She has very recently submitted her final year project, fulfilling all requirements. She is expected to present her project in an open house to seasoned academicians and industry representatives by the end of September 2026. She has the right attitude and skills to excel at your prestigious institute. She showed eagerness to learn new and complex concepts quickly. I would rate Sehrish's academic performance in my class as good. She is very eager to explore challenging problems. I would rank her among the top 15% of students I have taught in the past five years regarding her academic achievements. Overall, she is intelligent, honest, punctual, organized, reliable, and hard-working. She has good analytical and verbal communication skills.

It gives me immense pleasure to recommend Ms. Sehrish Siddique for higher studies at your prestigious institute. Sehrish would be a tremendous asset to your organization. Please feel free to contact me if you need any additional information.

I wish her success in her future academic and professional endeavors.

Yours sincerely,

Dr. Akmal Saeed Khattak

To Whom It May Concern

This is to certify that I know Ms. Sehrish Siddique, Registration number 04072213024, Session Fall 2022-26 for the past 4 years as a student of BS (CS) in the department of Computer Sciences, Quaid-i-Azam University, Islamabad.

She studied two courses with me, i.e., CS212 (Human Computer Interaction), and CS449 (ICT and Society). In both these courses her performance was above average in class, and she was among top 10% in her class and among top 5% across 5 batches.

She showed keen interest in this specialized area of CS. She developed a very good ability to understand and analyze the problem, and come up with critical comments that further lead to reports and at times prototypes of the recommended modifications. She is comfortable with team work as well as in working alone on a given task.

Personally, she is a well-mannered, interactive and humble student who is eager to learn and improve herself. I believe higher education and professional assignments can provide her an edge to pursue success and make useful technological contributions for the society. I wish her best of luck and success in her future endeavors.

Sincerely,

25-08-26

Dr. M. Shuaib Karim
Assistant Professor (Retd.)

To Whom It May Concern

I have had the opportunity to teach **Sehrish Siddique** in both **Data Structures and Algorithms** and **Web Application Development** during her undergraduate studies at Quaid-i-Azam University. These courses allowed me to see her work in different areas of Computer Science and to observe her engagement with both theoretical concepts and their practical use.

In Data Structures and Algorithms, Sehrish approached her coursework seriously and made a consistent effort to complete her assignments within the given timelines. I remember one assignment that required students to implement a map data structure using a binary search tree and linked structures, along with its associated operations and iterators. As she had not worked on such an implementation before, she initially found the assignment challenging and discussed possible approaches with me. After understanding the different approaches she could take, she worked through the requirements and completed the assignment within the given timeline, achieving a good result. Her approach to learning unfamiliar concepts and working through challenging coursework was reflected in her overall performance in the course, in which she earned an A.

I was particularly pleased with her work in a Web Application Development assignment in which she developed a university webpage from scratch using HTML and CSS and incorporated responsive design. During the viva for this assignment, I was able to discuss her implementation with her in greater detail. Her answers reflected a practical understanding of the concepts she had used. For example, when asked about the use of CSS Flexbox in her webpage, she was able to explain not only what it was, but why she had used it to arrange and align elements and how it affected the layout of her implementation. Rather than simply recalling the definition of a property, she was able to relate it to its actual use in her project. This gave me confidence that she understood the concepts she was applying rather than using them mechanically.

Across the two courses, I found Sehrish to be a student who took her coursework seriously and made a genuine effort to understand what she was learning. Her willingness to participate, ask questions, and connect theoretical concepts with practical applications stood out to me.

I am happy to recommend Sehrish Siddique for graduate study. I am confident that her academic preparation, practical understanding, and willingness to engage deeply with what she learns will serve her well in further study.

Sincerely,

Prof. Dr. Rabeeh Ayaz Abbasi
